# To Adjust

- 1. Set Generator Scope as follows:

   Frequency centering on sweep
   10.7 MHz

   Input level
   0.2 Vp-p/cm

   Output level
   1.8 mV∼5 mV
- 2. A waveform shown in Fig. 2 is obtained on the generator scope when the hook-up is made as illustrated above and the power source is applied to.
- 3. Adjust the cores of L2 so that maximum amplitude and optimum linearity are obtained.

#### NOTE

The 10.7 MHz marker need not be center positioned on the waveform.

# 12. ELECTRICAL PARTS LIST

#### NOTE:

When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

- For your Parts Stock Control, the fast moving items are indicated with the marks
   ★ ★ and ★.
- ★ ★: GENERALLY MOVES FASTER THAN ★.

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

• Parts whose parts numbers are omitted are subject to being not supplied.
